Subject: THORIUM REACTOR RESOLUTION

The American Nuclear Society has a global reach, and is dedicated to providing objective, sound advice and expertise on nuclear issues.

Recently, the Eastern Washington Section of the American Nuclear Society was made aware of a new concept in thorium reactor technology. The thorium converter reactor has many advantages which make it a very attractive option for energy generation, and for other ancillary benefits, such as isotope production. This technology is discussed in further detail in the attached resolution, which we commend to your attention.

Much more technical detail is available on this technology, should you wish to inquire further. At the moment, it is important to note that a substantial number of very knowledgeable people endorse this concept, and feel it is of sufficient importance to call to your attention.

We would appreciate your interest in this concept. Please contact us if you have further questions.

Very truly yours,

Carl G. Holder  
For the Board
